+ Photoshopping - or so it used to be - on the iPad is quite an elegant and versatile alternative to digital assistants (Facebook, Twitter, etc.). With iPhone and iPad apps, you can easily use your tablet to manipulate your images with Photoshop. In other words, you can use the iPad as a Photoshop remote. Adobe's latest version, Lightroom CC 2019, improves the workflow. It has color controls such as HSL and LAB. The program can detect and correct lens distortions, color, and lighting errors in images before you create clips or videos. It includes new presets and a way to make your images look fresh from the start. It also lets you synchronize between mobile apps, maybe the next time you travel. If you already own Elements—which itself pre-dates Photoshop by a couple of years—it should be relatively cheap to upgrade to Photoshop CC. But if you need Photoshop for the first time, it's still a pretty good deal. And the Mac App Store's model of offering a bundled price makes it easier to see Photoshop as a single package rather than breaking it down into smaller Photoshop elements that, if you want to get the most for your money, you'd have to buy individually. Even if you don't need the program itself, the upgrade is a good time to upgrade anyway. Consider it an investment in yourself, and wider skillset. Adobe released the first version of its Bridge for iOS, a system that lets you sync photos between mobile devices, laptops, and desktops. The latest version of the program will allow you to share files between photos over the AirDrop network and sync them over the Internet either to a central storage or to a folder on your laptop where you can access them from other machines. You can also import data files from a central storage such as Dropbox.

Lightroom is a grid based editor so it'll make exporting images as easy as possible. The beauty of using Lightroom and Photoshop together is the ability to see the photo in Photoshop before loading it into Lightroom. This will show you where the photos lighting is problematic if you are planning on using them as artwork. Other advantages to using Photoshop are the extra tools it offers and how it makes the whole process easier. As a note, you have the option to use other programs like Any Designer Pro for things like logos or Infocad for pieces that need to be drawn. These programs are amazing for editing and make the whole process that much easier. Photoshop is probably one of the most widely used picture editing software applications on the market today.
